

## Approved average weights of materials

The table below gives average weights of common items and materials, shown in Kilogrammes (Kg). These have been calculated from research carried out by MRWA and the Furniture Re-use Network.

For your calculation's material weight should be shown in Tonnes. **1000kg = 1 Tonne**  
e.g. a bedside unit at 14 Kg divided by 1000 = 0.014 Tonnes

During your project, materials should be weighed and verified whenever possible and actual weights used for monitoring outputs.

If you are unable to provide actual weight information and need estimated weights of items not on this list, please contact MRWA.

Category	Item Description	Average Weight in Kg
<b>Furniture</b>		
Furniture	Bedside unit, cabinet or table	14
Furniture	Bench, kitchen or garden, solid wood	30
Furniture	Blanket box, Ottoman	11
Furniture	Bookcase / Shelving Unit	21
